4300 Cherry Creek Drive South
Denver CO 80222-1530

Dear Mr. Schieffelen,

This is in reference to my letter to you, 95-DOE-11187, dated March 29, 1995, regarding the OU9 Dispute and CDPHE Request for Information. I am hereby transmitting additional information regarding the analysis of Building 887, Resource Conservation Recovery Act (RCRA) Unit 40.21 sludge. An omission was made in summarizing the analytical results on the sludges in Building 887, RCRA units 40.21 and 40.22 (tanks T-184 and T-185 respectively). The analysis of RCRA unit 40.21 indicated the presence of chromium at regulatory levels in the sludge, which was omitted in the letter. The finding of chromium is included in the packet of analytical results that was enclosed with the letter dated March 29, 1995, but was not discussed in the letter itself.

This does not alter the intent of the letter or its conclusions since the proposal was to slurry the sludge with water and trisodium phosphate, as necessary, and transfer the suspension to Building 374 for treatment. The Building 374 treatment process can receive RCRA metals including chromium. This additional information is provided to ensure completeness in responding to your request for these analytical results.

Please contact me at 966-7490 if you have any questions or need additional information.

Sincerely,

Gary N. Huffman
